

AirMax Bio & AquaMax Bio

AquaMax BIO is a compostable irrigation system produced from corn and the bio synthetic granulate Cradonyl®. All parts are biodegradable and will start breaking down within 3 to 5 years. It is therefore a much more durable solution than the standard plastic systems. Underground aeration and watering desperately needs the tree for the first few years after planting, after which the system is superfluous and the plastics remain useless in the ground.

Advantages:

- Natural resources!
- Sustainable and environmentally friendly
- 40% Reduction of CO2 gasses during the production process
- In the right circumstances the system is completely compostable

AirMax/AquaMax BIO meets all the requirements of biodegradability (biodegradable) according to the standards EN13432, ASTM D6400, Vincotte OK Compost.

Components

Irrigation / Aeration hose Bio
 Ø 80 mm
 50 m¹ per roll
 100% biodegradable
 Type: CNBS80
 Type: CNBSK80 (incl. coconut filtering cloth)

Connector Bio
 Ø 80 mm
 100% biodegradable
 Type: CNMK80

T-piece Bio
 80 x 80 x 80 mm
 100% biodegradable
 Type: CNT80

Click-fit end cover Bio
 Ø 80 mm
 100% Click-fit end cover
 Type: CNEK80

End cover with screw lid Bio
 Ø 80 mm
 100% biodegradable
 Type: CNES80

Couvercle à visser bio
 avec trous d'aération
 Ø 80 mm
 100% biodégradable
 Type CNEG
